PCP: PRE-COMMERCIAL PROCUREMENT

PCP pools the efforts of several public procurers in procuring R&D services which enables public procurers access to new products and services. By sharing risks and benefits with suppliers, optimum conditions are met for wide commercialization and take-up of R&D results.

PPI: PUBLIC PROCUREMENT OF INNOVATION

PPI refers to procurement where contracting authorities act as a launching customer (early adopter) to purchase/deploy innovative goods or services that are newly arriving on the market and which are not yet available on a large-scale commercial basis.

1.9	APÈNDIX – ESCENARI DEL CAS D'ÚS	122

Secure Access to PA-PHR-S

Smart secure identification of user/patient and access to the existing PA-PHR-S from any mobile device are mandatory requirements.

This function wants to give an answer to the following questions:

- Q1.1 - How can we ensure is it possible to identify and authorize users to access to their PA-PHR-S independently from the health authority they belong to and complying with the different norms and regional governance about the security and data access?
- Q1.2 - How can we ensure no data breach is possible?
- Q1.3 – How can we monitor the security and detect any data breach or misuse?
